

InvestSMART Growth Portfolio

September Quarter 2022

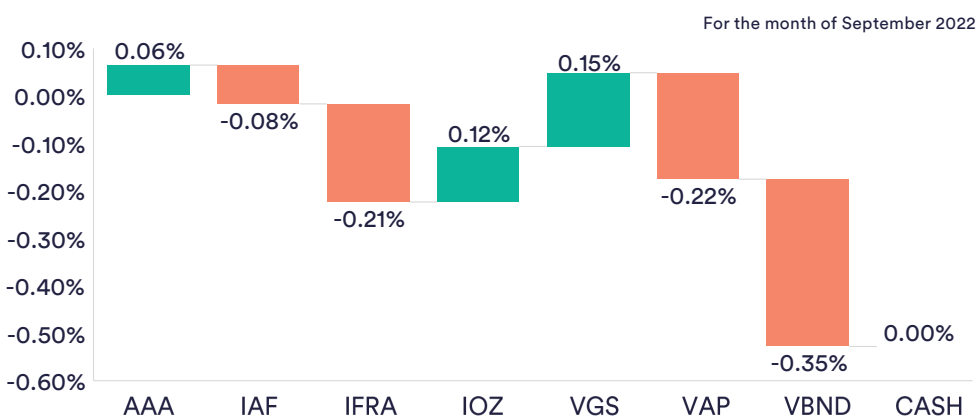

Despite all the doom and gloom in September the Growth portfolio managed to buffer itself from the worst of the market declines falling only 0.67 per cent after fees for the quarter.

There were no changes to the portfolio over the quarter and InvestSMART continues to review and evaluate the portfolio's holdings and performance to assure each one is providing the correct allocation you require for a growth risk profile and is meeting its long term stated goals.

Portfolio mandate

The Growth Portfolio is an exciting choice if you're saving for long term goals (5-years-plus) or you want to grow wealth for the future.

The objective is to invest in a portfolio of 5 - 15 exchange traded funds (ETFs), with more of an emphasis on 'growth' assets like shares and property that have the potential to appreciate in value over time.

VGS – Vanguard MSCI Index International Shares ETF – 32 per cent weighting

International equities have been under huge strain. Inflation is rife in the US, Europe and even Japan. Respective cash rates are rising at the fastest paces since the 1990s and 1980s while the globe is also facing an energy crisis not seen since the 70s, which is leading to the cost of living skyrocketing.

Yet despite all this international event risk, VGS finished the quarter down just 0.13 per cent. July and August were very positive months. There were expectations that global inflation was peaking, that energy prices may return to more manageable levels and that the US Federal Reserve in particular would moderate its rate hiking path.

This, however, was proven to be incorrect and led to a repricing of the global markets in September, which led to VGS having its worst month since the start of the pandemic.

Looking forward, markets are currently dealing with a high probability of recession in Europe and America. Markets are also grappling with rate increases that are bigger and sharper than most have experienced in living memory, which is making pricing difficult.

What should be noted about US recessions in modern history is: once a recession is confirmed, it normally leads to a rally in US equities. The main reasoning for these rallies is the market's belief things can only improve. Whether that trend continues into the future is something we are watching very closely.

IOZ – iShares S&P/ASX 200 ETF – 28 per cent weighting

IOZ was not immune from the tumultuous trading in the final month of the quarter. With financial risk rising, global concerns about inflation and every month of the quarter seeing a 0.5 per cent rate rise by Reserve Bank of Australia, IOZ could not hold on to the gains it made in July and August, finishing the quarter down 1.8 per cent.

That should be put into context. September was the worst month for global markets since March 2020 - the peak of COVID. Yet IOZ finished the quarter down just 1.8 per cent.

IOZ also had to deal with the majority of its holdings going ex-dividend which added to the downward pressure. That said, October will see those dividends actually returning to shareholders. It is a record amount, over AU\$43 billion. A significant amount of this will return to the market through dividend reinvestments which should support the ASX 200 and, by extension, IOZ to start the final quarter of the year.

How the remainder of 2022 will play out will come down to how pessimistic the global situation gets. But it should be noted, markets are always trying to price themselves 12 months ahead and October 2023 is likely to be much rosier than the situation we have now.

AAA – Betashares Australian High Interest Cash ETF – 13 per cent weighting

AAA continued to power ahead as interest rate rises from the Reserve Bank of Australia (RBA) translated into higher yields for money markets. The interest on AAA has now jumped to 2.73 per cent, having started the calendar year at 0.2 per cent. This is pushing the total returns on AAA to levels not seen in its history. This much-needed return from an asset class that has suffered over the last decade is good to see and is providing a solid defensive asset in your portfolio during this period.

IAF – iShares Core Composite Bond ETF – 11 per cent weighting

If it wasn't for the UK's government's decision to implement their unfunded tax cuts using UK government debt, Australian bonds would have probably finished the quarter in the black.

Having priced in the risk of rapid rate rises from the Reserve Bank of Australia (RBA) and other central banks in June, Australian bonds recovered solidly in July and August.

The Australian Commonwealth Government Bond

(ACGB) 10-year bond yield moved from 3.77 per cent at the end of June to 3.34 per cent at the end of August. This movement was not exclusive to the ACGB 10 year either and similar declines in yields were seen across all maturities, helping IAF appreciate.

However, as mentioned, the release of the UK's unfunded tax policy coupled with sharper and harder rate rises from the US Federal Reserve riled global and domestic bond markets, leading to a complete reversal of fortunes for IAF and seeing it lock in its second consecutive quarter of losses, finishing down 1.26 per cent for the quarter.

Looking forward, the very large and dramatic declines seen in the first half of 2022 are unlikely to recur in the final quarter as rate rises are now priced in, which should limit further downsides.

VBND – Vanguard Global Aggregate Bond Index ETF – 9 per cent weighting

It was a very tricky quarter for global bond markets and, by extension, VBND. VBND is heavily dominated by US bonds and with the US Federal Reserve signalling during the quarter it would not waver from its current inflation-busting path, bonds were heavily

sold off.

This was not the only issue faced by VBND, the UK government's decision to launch unfunded tax cuts sent UK gilts (bonds) into freefall, so much so that the Bank of England had to step in and stabilise the system by buying long-dated gilts.

This was not just felt in the UK as UK pension funds use global bonds to fund their defined benefits pension schemes. To cover the rising cost of funds owed to creditors, these funds were forced to sell their holdings to cover the cost. This meant that US, European and other developed bond markets the funds were invested in fell as well.

All this meant VBND fell 4.4 per cent for the quarter and logged its third consecutive quarter of declines.

We do not expect another policy mistake of the magnitude seen in the UK again and thus VBND shouldn't experience a quarter like the one just past. However, central banks across the world do continue to talk tough on inflation and this could lead to further bouts of volatile trading in fixed income markets.

VAP - Vanguard Australian Property Securities Index ETF – 6 per cent weighting

Australian property's exposure to interest rate rises was laid bare in the quarter. High funding cost, lower than expected commercial rents in the post-COVID world and the prospect of a declining construction industry all contributed to the 9.18 per cent decline in VAP over the quarter.

Property is in an interesting position. Currently funding costs have become more expensive and the market is clearly pricing in the idea that it will face higher costs for the foreseeable future.

VAP is well diversified and holds high quality assets in a range of property fields from industrial to commercial to residential. This diversification is unfortunately being ignored currently and we are unsure for how long.
